given to be  $SG = 1.25$ .

The density of water at 32 F is  $62.4 \text{ lbm/ft}^3$ .

Analysis The density of the fluid is obtained by multiplying its specific gravity by the density of water,  $2 SG$

$(1.25)(62.4 \text{ lbm/ft}^3) = 78 \text{ lbm/ft}^3$

### Fluid Mechanics

model of a pendulum. This is a weight (or bob) on the end of a massless cord suspended from a pivot, without friction. When given an initial push, it will swing back and forth at a constant amplitude. Real pendulums are subject to friction and air drag, so the amplitude of their swings declines.
